7. Two-way communication function

8. Phone call available – 2 family numbers supported

9. SOS emergency alarm

10. Geo-fence alarming function

11. Web-based online tracking platform

Product Specifications:

1, Three Working Modes:

Three working modes can be chosen for GPS data upload. The tracker can upload GPS data at preset regular time interval, by detection of vibration or by SMS command. With this function, youcan take the power consumption and GPRS traffic under control.

2, SOS Alarm :

There will be SOS button for emergency SOS alarm. Anyone carrying the tracker can long press the SOS button to activate SOS alarm. SOS alarm and location will be sent to pre-set SOS numbers.

3, 98 hours Standby Time:

With the built-in 1100mAh battery, the terminal can standby for 4 days. So much power, yet such a small size!

4, Two-way Communication:

Tracking is no longer passive. The tracker supports two-way communication with pre-set family numbers and numbers from the white list, which makes it convenient for family numbers to communicate with anyone carrying it.

5, Voice Monitoring:

SOS numbers can send SMS command to the tracker to activate voice monitoring function. The tracker will reply "OK" and start to call the SOS number. Once the call is connected, the voice monitoring function will be on.

6, Geo-fence Function:

A geo-fence can be set by SMS command to provide a safety net for your loved ones. When anyone carrying the tracker walks in/out of the fence,

SOS numbers will receive alarm.
